GMP course incl. Communication, Project Management & MS Office

Undervisning 5 dage om ugen

Step into the pharmaceutical industry with GMP, communication and project management, taught live online.

Do you want a career in an industry where quality, safety and precision come first, and where new skills are in demand? The course gives you a strong starting point. You get a thorough introduction to GMP (Good Manufacturing Practice), the set of rules that ensures medicines and other products are made safely, consistently and to a high standard.

You learn to navigate documentation requirements, SOPs, hygiene procedures and quality control, and you build a solid understanding of sterile production, audits and validation.

You also train in project management and communication. Both are essential when you work in teams, coordinate tasks and protect quality in complex processes.

You learn to plan projects, analyse stakeholders and communicate clearly and professionally in a regulated environment. The skills apply in the pharmaceutical industry, the food sector and quality assurance in other regulated industries.

You also gain insight into the strict requirements for sterile production in controlled cleanroom environments. You learn about correct hygiene, airlock procedures, protective clothing, and how equipment is cleaned and disinfected. You learn how the environment is monitored through environmental monitoring and ongoing hygiene control. Through cases, demonstrations and group work, you follow each step behind producing a sterile batch in line with GMP.

The course is taught live online. You join the class from home every weekday and work with your instructor and fellow participants in real time.

What you will learn

Pharmaceutical production, GMP 1

- Knowledge of the GMP rules
- SOPs, requirements and documentation
- Basic microbiology and hygiene
- Cleaning, disinfection and sterilisation processes

GMP in practice, GMP 2

- Internal audit and self inspection
- Error prevention and deviation handling
- Tools for systematic quality assurance
- Continuous improvement and problem solving through cases

Sterile medicinal products, Sterile 1 & 2

- Requirements for sterile production in cleanrooms
- How a sterile batch is produced in line with GMP
- Cleaning and disinfection of equipment
- Environmental monitoring and hygiene control

Qualification & validation

- Production quality and process optimisation
- Requirement specifications, qualification and validation
- Test plans, sampling inspection and monitoring
- Measuring equipment, calibration and maintenance

Project management & communication

- Projects and project management
- The project triangle
- Project phases, life cycle and project types
- Stakeholder and risk analysis
- Communication theory, incl. social constructivism

Data handling & AI

- Excel from basics to pivot tables and data analysis
- Document and information management in Microsoft 365
- Copilot for writing, summaries and quick data analysis
- Responsible use of AI in GMP companies

This course is for you if you..

- Are motivated to work in a focused way and need the final skills to move forward
- Want to work in the pharmaceutical or life science industry and are comfortable learning in English

Course format

Live online

Every weekday from 09:00 to 15:00. Teaching is live, with a total of 30 lessons per week, and alternates between theory, cases and group work. You take part from home, talk directly with your instructor and work together with the other participants. Course materials are available throughout the course.

Career coach

You get the opportunity to talk with Itucation's career coach about your CV, applications and job strategy. More information follows at the start of the course.
